

Lin Li

Madison, WI 53705 | lli674@wisc.edu | +1(608)720-4310

Education

University of Wisconsin-Madison, Madison, WI Sept 2025 – Exp. Dec 2026
Psychology, MS: Data science in human behavior

- **GPA:** 4.0/4.0
- **Coursework:** Applied Machine Learning, Programming for Human Behavioral Data Science, Design and Analysis of Psychological Experiments, Large-Scale Behavioral Data Science, Human-Computer Interaction

Xi'an University of Architecture and Technology, Shaanxi, China Sept 2019 – June 2022
Architecture, ME: Building Technology Science

- **GPA:** 85.2/100
- **Coursework:** Architecture and Urban Physical Environment, Green Architectural Technology Method

Technical Skills

Languages & Databases: Python, R, SQL, Git/GitHub

Data Analysis & Modeling: Machine Learning, Statistical Analysis, Hypothesis Testing, Experimental Design, Factor Analysis & Clustering, EDA

Visualization & Tools: Tableau, Matplotlib, Seaborn, LLM Annotation / Prompt Engineering, Quarto/Markdown

Projects

Public Sentiment & Behavioral Modeling on Data Center Infrastructure Jul 2026 – Present

- Designed an LLM-powered NLP pipeline to convert social media text into structured datasets, applying Factor Analysis and clustering to extract key public sentiment drivers
- Built behavioral models (XGBoost, Logistic Regression) with SHAP interpretability to quantify how resource concerns (e.g., water usage) and political cycles influence public opinion

Insurance Market Efficiency & Climate Risk Modeling Mar 2026 – Apr 2026

- Analyzed information asymmetry in insurance markets by comparing coarse and fine climate risk models using Linear Regression and Random Forest across 80,000+ data points
- Reduced prediction error (RMSE) by 80% with the fine model, leveraging Feature Importance and ALE plots to pinpoint model failure conditions (e.g., building age)

Experience

LONGi & CENTER Renewable Energy Co.,Ltd., Shannxi, China July 2022 – Aug 2025
Photovoltaic System Engineer

- Completed preliminary design and feasibility analysis for 30 distributed photovoltaic projects, with 8 projects successfully awarded
- Conducted PV system design for projects across various applications, including rooftops, curtain walls, and solar carports, supporting the grid connection of 80+ MWp PV capacity
- Performed quantitative analysis on system performance and energy yield data across 20+ sites, delivering data-driven insights that optimized design specs and guided engineering decisions
